

Steps for mounting shared folder.

In Windows (On VirtualBox):

- In VirtualBox
 - Settings
 - Shared Folder
 - Select the folder you need to mount.
 - Check Automount option.
 - In VM
 - `#sudo adduser user vboxsf`
 - `#sudo mkdir /mnt/shared_folder`
 - `#sudo mount -t vboxsf sharedfolder /mnt/shared_folder`

In Mac (On UTM):

- In Mac
 - System Preferences
 - Sharing
 - Select the folder and add it.
 - Enable File Sharing and Remote login.
 - Enable all users access to the shared folder.
- In UTM
 - Select Shared Directory and choose the shared folder.
 - Open Files
 - Other locations
 - Login through your mac using remote login and access shared folder.
 - **OR**
 - In terminal
 - `#sudo apt-get install smbclient`
 - `#sudo mkdir /mnt/shared_folder`
 - `#sudo mount -t cifs -o username=user, password=pass //serveripaddr/sharedfoldername /mnt/sharedfolder`
